-! FUNCTION: ATTS AS THE TARGET FOR THE CELL-CYCLE ARREST AND IMMONOPERESIVE REPETING OF THE FKBF12-KAPAMYCIN COMPLEX.
-! SIMILARITY: BELOANS TO THE PI3/PI4 KINASES FAMILY.
-! SIMILARITY: ALLONIS & HEAT REFEALS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            .
